1,500 units sold, no claims!

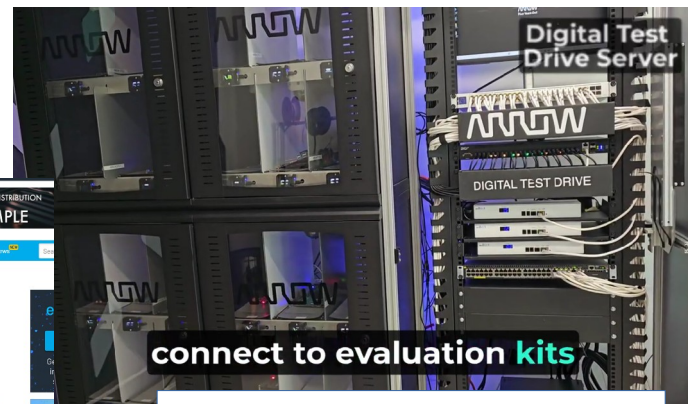

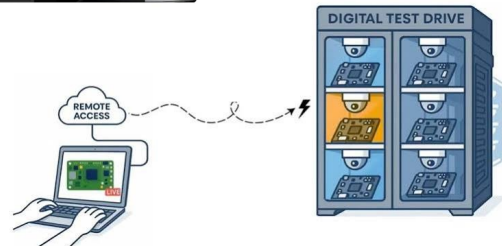

[illegible]

A custom-built mechanical device, likely a 3D printer or CNC machine, featuring a large black motor, a metal frame, and various mechanical components like gears and belts. The device is constructed from metal plates and rods, with a prominent black motor on the left side. The overall design is functional and appears to be a prototype or a specialized machine.

Wire beding robot for Orthodontics (From O)

Made it to world
media news!

Conducting the final tests for our MIPI CSI-2 lab ahead of the FPGA Conference on July 1 ☀️.

The lab is part of the Arrow Digital Test Drive, giving developers the opportunity to gain hands-on experience with MIPI CSI-2 camera interfacing on Agilix™ 3 FPGAs in a cloud-based environment.

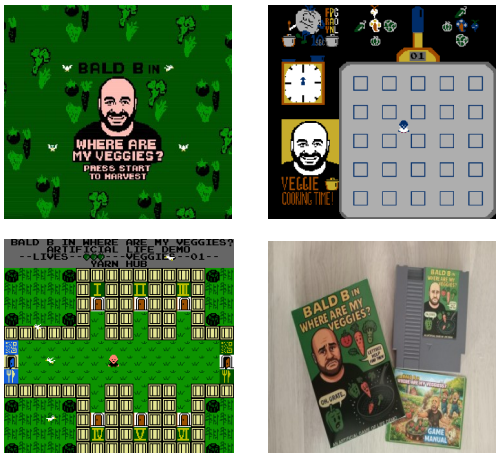

Looking forward to showcasing it at the FPGA conference 2026!
